Feedback from Week Two

THE LONDON SCHOOL
OF ECONOMICS AND
POLITICAL SCIENCE ■

General feedback from last week

Overall strengths

- Most of you identified Kimmel's central argument accurately: gender equality benefits both men and women. Many also captured the overall structure of the talk well, showing an understanding of the argument rather than just individual details.
- Paraphrasing was generally strong. Most students reworded ideas effectively rather than copying, with some particularly successful paraphrases in the discussion of privilege.
- The strongest evaluations were thoughtful and critical, questioning issues such as correlation versus causation, reliance on anecdotal evidence, Western bias, and the limits of a purely benefits-based argument for equality.

General feedback from last week

Areas to work on:

- Accuracy of examples. Common errors included misattributing the "privilege is invisible" quotation to Kimmel rather than the Black woman, getting dates wrong, and misunderstanding Kimmel's joke about long-term data collection.
- Coverage and balance. The shortest papers were not able to cover the key points, and the longest sometimes gave more space to students' proposals than to the lecture.
- Language accuracy and proofreading. Check subject-verb agreement, countability (research, not researches) and word choice (beneficial rather than is benefit for). Also watch for the recurring typo "gender *quality*" instead of "gender *equality*".

The CRAAP Test

The CRAAP test is a method to evaluate the credibility of a source. It has 5 main components

1. **Currency:** Is the evidence recent? Are statistics or studies up to date?
2. **Relevance:** Does the evidence directly support the speaker's argument?
3. **Authority:** Who is the speaker? Are they considered reputable and trustworthy in their field?
4. **Accuracy:** Is there enough evidence for the speaker's claims? Is the evidence reliable or mainly anecdotal?
5. **Purpose:** Is the speaker trying to inform, persuade, or advocate? Could this shape how evidence is presented?

Applying the CRAAP Test to Kimmel's TED Talk

Criterion	Questions to ask	Possible evaluation
Currency	Is the evidence up to date?	
Relevance	Does the evidence support the main argument?	
Authority	Is the speaker a credible expert?	
Accuracy	Is the evidence reliable and sufficient?	
Purpose	Why was the talk delivered?	

Applying the CRAAP Test to Kimmel's TED Talk

Criterion	Questions to ask	Possible evaluation
Currency	Is the evidence up to date?	The talk dates from 2015, so some evidence and attitudes may have changed.
Relevance	Does the evidence support the main argument?	Most examples are relevant, but the focus on Western contexts may limit wider applicability.
Authority	Is the speaker a credible expert?	Kimmel is a sociologist specialising in gender and masculinity, which strengthens his credibility.
Accuracy	Is the evidence reliable and sufficient?	He uses research, but also anecdotes and correlations that do not necessarily establish causation.
Purpose	Why was the talk delivered?	The aim is to persuade, so supporting evidence is emphasised and counterarguments receive less attention.

Teacher Feedback

- Your teachers have read your summaries and given you feedback on “strengths” and “areas for improvement”.
- Read your feedback and let your teacher know if you have any questions.

AI Feedback

Now open the **Listening into Writing AI Feedback Workbook** on Moodle and follow the instructions for Practice 2.

If you do not have time to do all the activities in class, please complete them at home.

Remember: AI is a tool to support your learning. It does not replace your thinking or your teacher.

Once you have completed the workbook, reflect:

1. Did you find the feedback useful?
2. What, if anything, have you learned?
3. Was there anything that surprised you?
